PROFESSIONAL SUMMARY

Security+ certified cybersecurity analyst with hands-on experience across vulnerability management, security operations, threat hunting, detection development, system hardening, and security automation in Windows, Linux, and Azure environments. Experienced with Tenable/Nessus, Microsoft Defender for Endpoint, Microsoft Sentinel, KQL, and PowerShell to identify risk, investigate threats, automate remediation, and strengthen security controls. U.S. Marine and summa cum laude cybersecurity graduate with a 3.99 GPA.

CYBERSECURITY EXPERIENCE

Cybersecurity Support Analyst Intern | Log(N) Pacific

Jan 2026 - Present

Vulnerability Management & Security Operations - Azure-Hosted Enterprise Cyber Range with Live External Attack Activity

- Supported vulnerability scanning, risk prioritization, remediation, and validation across Windows and Linux systems, contributing to reductions from 2 to 0 critical findings, 12 to 1 high findings, and 17 to 2 medium findings in the measured server environment.
- Performed secure-configuration and DISA STIG reviews with Tenable/Nessus and developed PowerShell remediation and hardening workflows to reduce manual effort and accelerate finding closure.
- Investigated EDR/SIEM telemetry with Microsoft Defender for Endpoint, Microsoft Sentinel, KQL, and Azure Log Analytics for brute-force activity, data exfiltration, and ransomware indicators; built custom detection rules and dashboards to improve investigative visibility.
- Configured Azure NSGs and virtual-machine host firewalls to restrict inbound exposure; observed brute-force activity dropped to zero during the measured period after the controls were implemented.

SELECTED CYBERSECURITY PROJECTS

- Password Spray Threat Hunt - Live Threat Cyber Range Investigation:** Used Microsoft Defender for Endpoint Advanced Hunting and KQL within a Microsoft Sentinel workflow to trace an RDP compromise through execution, persistence, evasion, command and control, and attempted exfiltration; mapped evidence to MITRE ATT&CK and identified detection opportunities.
- Akira Ransomware Threat Hunt - Simulated Cyber Range Exercise:** Analyzed Microsoft Defender for Endpoint telemetry with KQL to scope affected hosts and reconstruct remote access, staging, lateral movement, defense evasion, data staging, and impact; documented IOC timing, ATT&CK mappings, evidence gaps, and detection opportunities.
- WannaCry Ransomware Investigation - Live Threat Cyber Range Investigation:** Investigated a threat-actor ransomware compromise of an exposed Azure VM after insufficient NSG and host-firewall controls allowed brute-force access; used KQL in Azure Log Analytics to correlate file, process, registry, and network telemetry, confirm file-encryption impact, build the incident timeline, and assess lateral movement.
- Vulnerability Management & DISA STIG - Lab project:** Reduced Tenable findings from 32 to 4 through authenticated scanning and remediation; scripted and validated selected Windows 11 STIG controls with PowerShell.

ADDITIONAL EXPERIENCE

Warehouse & Facilities Manager | UTB Ventures | Los Angeles, CA

Mar 2015 - Jan 2026

- Installed, maintained, and troubleshot the facility network and IP security-camera system, including connectivity and device-access issues.

Field Artillery Fire Control Man, Fire Direction Control | United States Marine Corps

Sep 2009 - Dec 2012

- Led teams of 3 to 8 Marines as an NCO while operating, maintaining, and troubleshooting mission-critical communications and targeting systems under time-sensitive conditions.

EDUCATION & CERTIFICATIONS

Norwich University: B.S. Cybersecurity, Computer Forensics & Vulnerability Management | Mar 2025

GPA: 3.99 | Summa Cum Laude

Cypress College: A.S. Business Administration | May 2021 | Graduated with Honors

Certifications: CompTIA Security+ | May 2026 • Google AI Professional | Jul 2026

TECHNICAL SKILLS

Vulnerability Management & Hardening: Tenable/Nessus, Authenticated Scanning, CVE/CWE Review, CVSS Scoring, Risk Prioritization, Remediation Tracking, DISA STIG, Windows/Linux Hardening

Security Operations & Detection: Microsoft Defender for Endpoint, Microsoft Sentinel, KQL, SIEM/EDR Analysis, Threat Hunting, Incident Triage, MITRE ATT&CK Mapping, Detection Rules, Azure Log Analytics

Automation & Systems: PowerShell, Bash, Python, SQL, Active Directory, Windows, Linux

Network & Cloud Security: Azure NSGs, Firewalls, pfSense, Wireshark, VLANs, SSH, RDP
